FUELING SYSTEMS

WAYNE SELECT

Technology that Drives Efficiency

In a class of its own, the Select electronic fleet dispensers are equipped with the same cutting-edge electronics, extra-large displays and latest metering technology as our premium retail dispensers. Combined with rugged construction, the result is long-lasting, high-performance solutions for both underground and aboveground storage tank fleet fueling applications. Common components with our retail dispensers provide additional benefits of readily-available service parts and technicians nationwide.

Decreased Fueling Time, Increased Fueling Control

The optional Wayne iX Fleet™ fuel control system provides 24-hour unattended access with full accountability of all fuel usage. The in-dispenser terminal simplifies installation and the user interface by moving access control directly to the point of fueling. Alternatively, the interface options allow connection to popular third party fuel control systems.

High Tech, High Performance

The Select electronic fleet dispensers utilize the Wayne iGem™ software to allow smooth operability via user operating messages, transaction limit controls and simplified diagnostics. All models are equipped with electronic calibration for simple, precise reliability and advanced displays to communicate operating status.
